High performance
with a wide range of
solutions and options.

Product description

The professional, safe filling of various liquids is an important processing step for many companies. All-round filling system FSL-PRO S meets the requirements for paints and lacquers, chemicals, petrochemicals and pharmaceutical products, construction materials and food.

Also particularly difficult to process products are reliably filled and weighed in different containers.

Besides this flexibility you benefit from reduced downtimes. You can change products and units quickly and easily. The FSL-PRO S is also available as an Ex model for zones 1 and 2. Same as with all our Ex models it meets ATEX guidelines. No need to remove the filling valve for efficient and thorough cleaning of the system. You save work steps and time. Ideal for frequent product changes. The filling system can be easily run by an operator and allows parallel working: Optional expansions let you perform capping and labeling of your products during filling.
